H being predicttheboundaryvalues). As explainedbyWilliams 15 , thisconditionresultsin actually a quantity equal to the physical pressure correction except at the boundaries. A correction to I-I could then be applied in order to recover the physical quantity; however, that step is not necessary, since the boundary derivative of YI is not required in solving the momentum equations. The elliptic equation with the Neumann boundary condition is solved using a direct method that is vectorized for the CRAY-XMP 16 . The solver has no problem with the fact that there is not a unique solution for the axisymmetric part. It should be noted that the solution of the pressure equation is the most time consuming part of the model. For this reason, we provide a control that skips the pressure update if the maximum absolute value of the divergence is smaller than a prescribed value. F.
